

Rumen Protected Choline Chloride

Introduction

Choline is a water soluble essential nutrient for animals, often classified as one of the B Group of vitamins. It is an important key in poultry and swine nutrition, but it is known that Rumen micro-organisms do not supply enough choline for the high yielding dairy & beef cattle's need. Choline is methyl donor and vital for cell structure, fat transport, nerve function and metabolism. It is also precursor for other important compounds in the body.

Supplying unprotected choline in Ruminant feed is not a solution. As it will be degraded in rumen & return least or nil Bioavailability. Innovation from Bioceutisch launches a Microencapsulation technology, to protect Choline from ruminal degradation & return highest bioavailability to animal.

Composition

Each kg contains:

Choline Chloride	25%
Carrier & coating agent	Q.S.

Indication

As a feed additives enhance milk production

Inclusion rate

Dairy Cattle
Beef Cattle
Sheep & Goat

Compound Feed

5-8kg per ton of feed
3-5kg per ton of feed
2-4kg per ton of feed

Top dress of feed

40g-80g/ head/ day
20g-40g/ head/ day
15g-30g/ head/ day

Bioceutisch B.V.

Ceresstraat 13, 4811CA, Breda, Netherlands.
