

Opti Fat-84

INTRODUCTION

For Dairy cow, rumens activities are so crucial that energy supplement via oils and fats will have to be modified in a way it by-pass the rumen before it could be absorbed. The calcium fat offers one such alternative. The calcium bonding with fatty acids prevents the product from being reacted upon in the rumen stage thereby providing the crucial 'inertness'. The **Opti Fat 84** is a calcium fat of long chain fatty acids made from freshly processed fatty acid distillates of palm oil and reacted with calcium sources. The calcium fat stays inert in the rumen and then passes on through to the abomasum where the relative low acidity condition will naturally break down the calcium bonding and allow for optimal intestinal digestion. **Opti Fat 84** rumen inert fat is an off-yellow flakes/granular powder providing high energy in dairy feed ingredients. Unlike other fat sources, this unique product does not interfere with rumen fermentation and is highly digestible in the intestine. This product is used as a sources of energy in rumen feed.

BENEFITS

- ▶ **84% Fat content**
- ▶ **Improved feed conversion rate**
- ▶ **Better digestion and absorption rate lead to higher net energy.**
- ▶ **Specifically design for rumen bypass dairy cows to increase milk production and better quality of milk.**
- ▶ **Reduce incidence of ketosis therefore energize fertility.**

INCLUSION RATE

Dairy Cow : 500gm-1000gm / Day
Cattle : 200gm-300gm / Day
Sheep: 50gm-150gm / Day

PACKING

25Kg Bag

Bioceutisch B.V.

Ceresstraat 13, 4811CA, info@bioceutisch.nl

Breda, Netherlands.
